EXPERIENCE

Oasis Infobyte

Intern | 2 Months

FRONT END

- During my internship, I mastered HTML5, CSS3, and JavaScript.
- I excelled in developing landing pages, portfolios, and temperature converters, gaining valuable hands-on experience.

Edunet Foundation

FRONT END

Intern | 2 Months

- I gained a deep understanding of HTML5, CSS3, and JavaScript and developed a highly responsive portfolio with effective hover effects using CSS3.
- It contains Home, Education, About, and Contact sections and is optimized for various device sizes.

PROJECT(S)

E-COMMERCE WEBSITE

4 Months | — [Live Demo](#)

I build a complete e-commerce website from scratch, which includes both the front end and back end. The front end is responsive and was built using HTML5, CSS3, and JavaScript. The backend utilizes MySQL and PHP connected to the XAMPP server. MySQL and PHP and connect to the XamPP server

- Experience a seamless and responsive multi-page website designed to adapt flawlessly to all devices, including mobile phones, laptops, and notepads, through the utilization of CSS3 Media Queries.
- Featuring a user-friendly search bar and category search with JavaScript functionality, this website have pages for home, shop, search, blog, contact, about and cart.
- The responsible cart page is meticulously crafted using HTML5, CSS3, and JavaScript for a streamlined shopping experience.
- Engage with our responsive chatbot for quick and efficient assistance, enhancing user satisfaction through HTML5, CSS3, and JavaScript.

IoT BASED AQUATIC RESOURCE

MANAGEMENT SYSTEM

5 Months | Project link: [View Here](#)

- IoT-based modern fish farming uses sensors to monitor and manage aqua resources. Sensors track water quality,
- feeding, environmental conditions, and fish behavior, enabling real-time data collection. This information helps optimize feeding schedules, detect diseases early, control water quality, and manage waste.
- IoT also allows remote monitoring and automation, leading to increased productivity and sustainability in fish farming.

WFMS (WASTE FOOD MANAGEMENT SYSTEM)

2 Months | WFMS: [View Here](#)

In the Waste Food Management System (WFMS) project, there are three main roles: Donor, Delivery Agent, and User. The Donor donates food, the Delivery Agent tracks the Donor's location and delivers the food to people in need, and the User sends the locations of people who require food if they find any. I developed the interface for this project using Figma.

PERSONAL PORTFOLIO

Portfolio: [View Here](#)

I developed a personal portfolio using HTML, CSS, and JavaScript, which includes Home, About, Services, Portfolio, and Contact pages, all with beautiful hover effects.

FAKE NEWS DETECTION USING MACHINE LEARNING IN PYTHON

Fake News Detection: [View Here](#)

- Developed a machine learning model to classify news articles as real or fake using Python.
- Utilized Natural Language Processing (NLP) techniques for text preprocessing, including tokenization, stopwords removal, and TF-IDF vectorization.
- Implemented Logistic Regression for classification and achieved an accuracy of 92%.
- Trained the model on a dataset from Kaggle (20,000+ articles).
- Built using pandas, nltk, scikit-learn for data handling, feature extraction, and model evaluation.

REACT HEALTHCARE DASHBOARD

Healthcare Dashboard: [View Here](#)

- I Built a responsive dashboard using React.js for desktop view with reusable components and clean UI.
- Dashboard includes features like patient stats, upcoming appointments, activity feed, vitals tracking (heart rate, BP, temperature, oxygen), and human anatomy visualization.
